

## Set Tayo ng Date – Installation Manual

### About the Project

This project is a requirement for the subject CS 192 for the 2nd Semester of Academic Year 2016-2017 under Ma'am Rowena Solamo.

### About the Software

Set Tayo ng Date is a software designed so that its users can meet with each other on common free times thru a request.

### Software Deployment and Installation

Administrators who want to deploy this software for their own use should have an installation of python 2.7.12 and Django 1.10, newer versions are not yet tested hence they are not advised to be used.

Should ever the admin does not have an installation of said software, they are available at:

- [Python 2.7.12](#) (windows, linux users should upgrade their existing python installations if they haven't yet)
- Django installation:
  - After installing python, user should download Django via pip which is included in the windows installer while linux users should install pip via apt-get before downloading Django.
- The software can be found at <https://github.com/DarkPotatoKing/cs-191-192-repo/tree/master/05-Implementation/SetTayoNgDate>

After installation of the required software, the admin will need to:

1. Go to the directory where the software was extracted to
2. Run initial database migrations via "python manage.py migrate"
3. Run the server using command "python manage.py runserver <ip of machine>" for network access
